DETAILED ACTION

Allowable Subject Matter

The following is an examiner's statement of reasons for allowance:

Wang (6167084) discloses an apparatus that allocates bits in a statistical multiplexing system. This apparatus comprises "a regulation process that uses quantization scales and the input signal to determine the complexity" (Wang: figure 4, wherein the regulation process is performed by the encoder and decoder), "computing a weighting factor of compressed data quality, the weighting factor being computed for a current picture as an average over a set of preceding pictures, of an average quantization scale and a number of bits" (Wang: figure 6, column 11-column 12, wherein the weighting factor is the complexity measure shown in equations 5 and 7-8, the compressed input signal is the compressed program), and "allocating the output bit rate to the transcoding channel from a total output bit rate, indicator, and a sum of the indicators" (Wang: figure 6, column 8, lines 54-67- column 9, lines 1-25, wherein the output bit rate is the target number of bits, the sum of the indicators is the complexities of each frame) and the indicator is computed from an average of a function of average quantization scale and a number of bits used to encode the picture" (Wang: columns 11-12, wherein the average quantization scale is $Q_{l,n,t}$, the number of bits used for the picture is $R_{l,n,t}$). However, Wang fails to disclose the indicator and the specifics of the weighting factor as claimed. A further search was

conducted which failed to yield any prior art. Therefore, the prior art fails to teach or render obvious these limitations taken within the others in the claim.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
